

PathoPress evaluation burden evidence: coverage, not imputed cost

A. Evidence coverage (n=187)

B. Numeric burden curve

Labels show evaluation-specific / any sourced context. Family defaults are not measurements.

NOT MEASURABLE YET

0 / 187 protocols report
observed runtime and dollar cost

Sample count, batch size, step limits, and
qualitative access notes are evidence—but not cost.
Unknown values remain unknown, never zero.

Observed runtime, hardware make/model, annotation hours, and dollar cost: 0/187. A numeric cost curve is therefore unsupported.
